

$$D = r \cdot t$$

$$= \frac{18 \text{ miles}}{1 \text{ hr}} \cdot \frac{4.5 \text{ hr}}{1}$$

$$r = \frac{18 \text{ miles}}{1 \text{ hr}}$$

81 miles

$$\frac{18 \text{ mile}}{1 \text{ hr}} \cdot \frac{1 \text{ hr}}{60 \text{ minutes}} \cdot \frac{1 \text{ minute}}{60 \text{ sec.}} \cdot \frac{5280 \text{ ft.}}{1 \text{ mile}} = \frac{44 \text{ ft}}{1 \text{ sec}}$$
